

# TOUCHDOWN SETUP

The following steps serve as a guideline to set up Touchdown on an Android:

1. Open Touchdown and select the **Settings**  button.
2. Select **Advanced**.
3. Select **Legacy Settings**.
4. At the very top of the screen is a gray button labeled **Quick Configuration** – select this button.

# TOUCHDOWN SETUP

5. Enter the full email address (i.e. exotestuser@uakron.edu) and password.
6. At the bottom left select **Automatic**.

The screenshot shows a 'Quick Configuration' window with a blue header. The main content area is titled 'Configure your Account' in green. It contains two input fields: 'Email Address' with the value 'exotestuser@uakron.edu' and 'Password' with masked characters '.....'. Below the password field is a checkbox labeled 'Show password characters' which is unchecked. A red error message states: 'AutoDiscovery may not be supported for your server. Please click the 'Manual' button to perform your configuration manually.' At the bottom of the window, there are two buttons: 'Automatic' on the left and 'Manual' on the right. Two black arrows point to the 'Automatic' button, one from the left and one from the bottom left.

7. Wait for the configuration to complete. It will take a few minutes.
8. Once complete, perform a sync – this may take up to 30 minutes, depending on the amount of data you have on the server (mail, contacts, etc.).
